

Both percent and fixed width should be taken into account if they are on different cells in one column. Only for table with no width set

Percent width cell
Fixed width cell

Same table with cells in defferent order.

Fixed width cell
Percent width cell

It is also true for width set in colgroup...

Fixed width cell
Percent width cell

...or cols...

Fixed width cell
Percent width cell

but col overrides it's colgroup property, and only one is used for layout.

No width set
--------------

Same table with percent and absolute width in different order for colgroup and col respectively.

No width set
